The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/511,335	Applicant(s) REITINGER, ERICH	
	Examiner Stephen M. Gravini	Art Unit 3743	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

Claims 1 and 3-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Tarui et al. (US 5,657,553). The claims are reasonably and broadly construed, in light of the accompanying specification, as being disclosed by Tarui as comprising:

preparing a space **10** which is essentially enclosed by a container and has a wafer/hybrid holding device which is located therein and has the purpose of holding a semiconductor wafer and/or hybrid; and

pre-cooling a dry fluid in a heat-exchanger **28** outside the space;

conducting the pre-cooled fluid from the heat exchanger into the wafer/hybrid holding device via a first line **22**, and then through the wafer/hybrid holding device to cool the wafer/hybrid holding device;

conducting at least a portion of the fluid having left the wafer/hybrid holding [device? assuming the recitation "device" was intended to be also claimed] to the heat exchanger via a second line **21**;

heating the portion, by using the portion for the pre-cooling of the fluid in the heat exchanger (column 4 line 66 through column 5 line 11); or alternatively:

wherein at least a portion of the fluid having left the wafer/hybrid holding device is used to condition the atmosphere within the space (figure 1);

wherein the heated portion is conducted from the heat exchanger into the space via a third line **17b**, before being allowed to flow out within the space to condition the atmosphere in the space. Tarui also discloses the claimed portion is firstly heat-treated and then allowed to flow out within the space (figure 1), characterized in that the portion is heat-treated outside the space and then fed back to the space (column 4), characterized in that the portion is allowed to flow out within the space directly after it leaves the wafer/hybrid holding device (figure 2).

Response to Arguments

Applicant's arguments with respect to claims 1 and 3-9 have been considered but are moot in view of the new ground of rejection.

Conclusion

Other prior art references cited with this action disclose one or more features of the claimed invention, but are not relied upon in rejecting the claims.
